

Certificate of Non-Expiration

In as much as the pumice that is processed in our facilities is an inorganic natural mineral, we hereby certify that the shelf life of our pumice products* is indefinite and not subject to an expiration date.

RECOMMENDED STORAGE PRACTICES

It is recommended that packaged pumice be stored in an area that is dry and protected from the elements/weather. No minimum or maximum storage temperatures have been established, however for the purpose of clarification, the recommended storage temperature range is -20° – 120° Fahrenheit.

***DISCLAIMER**

Pumice, in and of itself and when stored in its raw, dry form, is not susceptible to expiration. This does not apply to any other ingredient that may be added to the pumice for the purpose of creating a finished product.
